

Avaya One-X Communicator Search Active Directory

Open Avaya One-X Communicator and go to "General Settings" and "Public Directory":

Configure the fields as below:

- Directory Type: Active Directory
- Directory Name: *(Choose name)*
- Server Address: *IP Address of Domain Controller*
- User name: *Username@domain (with access to browse the directory)*
- Password: *Password for above user account*
- Search Root: *Enter DN root of Domain (example DC=domain) (or narrow search down to a specific OU if required)*

Note: It may be best to add an Active Directory user specifically for this purpose with a password that does not change.
